That does not mean that we will not be able to get the Mi A1, it's just that we will not get the phone officially. Google Play will follow the same trend and the company will launch the Play Store version for the Huawei Honor 8. The app is already available for download, but it won't be official. You will need to manually install the application via Play Store. The process might be a little difficult for some users, especially with older versions of Android, but it is pretty simple. The Honor 8 runs on the Android 7.0 Nougat out-of-the-

box. So, if you have a stock smartphone, you should be able to get it done. While installing the app, you should be careful and confirm that you are installing a copy of the app. Do not select the option "Install" if you see an option to download the app from Google Play.

Hierarchical free-energy surfaces for detection of collective variables in molecular dynamics. We present a general method for reconstructing a reaction coordinate (RC) from the energy

[Psychometric studies on the German version of the "pragmatic leadership inventory" (PLI-D). Results of a multicenter study]. The present study reports about the psychometric evaluation of the German version of the "Leadership Inventory" (Pragmatic Leadership Inventory-D) which was developed by Deluga and Brawman. The

following five items of the OLI-D are excluded from statistical analysis because of the low validity of the items: "inflexible in handling people with diverse beliefs and attitudes" and "my decisions are considered to be correct even though I do not always agree with them". The remaining 7-item scale (OLI-D) is a seven-point Likert scale. It is subdivided into three subscales: the "leadership style" (4 items, $\alpha = 0.82$), the "work-related influence" (3 items, $\alpha = 0.77$) and the "result-oriented influence" (2 items, $\alpha = 0.73$). The validation procedure of the scale with 373 employees of different German companies is based on the following methods: a) correlation analyses, b) factor analyses, c) test-retest-reliability and d) discriminant validity. The seven items appear to be independent within the "leadership style" factor and the "result-oriented influence" factor and load on one common factor (work-related influence). The "leadership style" factor and the "work-related influence" factor are positively correlated. With regard to the discriminant

validity, we observed a small, insignificant correlation between the "leadership style" factor and the "work-related influence" factor.

The "result-oriented influence" factor was negatively correlated with the "leadership style" factor and not significantly correlated with the "work-related influence" factor. The two-factor structure and the adequate validity of the "Pragmatic Leadership Inventory-D" show that the German version of the OLI can be used as a reliable and valid instrument for empirical research.

1848 English cricket season 1848 was the 74th season of cricket in England since the foundation of Marylebone Cricket Club (MCC). The season consisted of 11 matches, 10 of which were first
