Drawing viewing/editing AutoCAD displays one-dimensional and two-dimensional drawing information. The three-dimensional information contained in most drawings is often displayed as wire-frame. The user can view, edit and manipulate information in a 2D and/or 3D drawing. One-dimensional drawings include both 2D and 3D views and information, while 3D drawings contain an actual 3D view of a model. Drawing database A drawing database (e.g. DXF files) provides an import/export method to share drawing data. Blocks (or reference entities) Blocks, in AutoCAD, are entities which are defined in the 3D Modeling Environment and are very important for 2D and 3D drafting and design. Each block can be grouped into categories, called "supertypes". Supertypes provide a classification of the blocks. Data linking Drawing objects have properties which can be linked to other drawing objects. Linked objects can have specific properties with respect to the linked drawing object. Examples of properties are dimensions, text, block properties, attributes, drawing features, styles, markers, legends, etc. Data management Automatic memory management of blocks and links within drawings is done by the draw tool (refer to "Drawing" section above). When new blocks or links are added, they are automatically allocated memory from a reserve storage area. This can be a problem if the storage area is already full. Linking functions, such as associating linked blocks, are the basis for creating models in 2D and 3D. Editing When a user edits a drawing, or creates a new drawing, they can either use the "old" interface (command-line interface) or a "new" interface (graphical user interface) for the drawing program. The user can edit the drawing from within the drawing program. In the case of a new drawing, they can insert new objects, change existing objects, and can export the drawing to other programs, including printing. Memory-saving techniques, such as batch command execution, minimizes the load time of the program. AutoCAD 2018 has a toggle in the Options dialog to automatically load or save the drawing or block. History Autodesk announced AutoCAD (then AutoCADDESIGN, as an acronym) on August 12, 1991, when it was first made available to Microsoft Windows customers. According to a company spokeswoman, Autodesk "believes that its product is distinctive ca3bfb1094

NASA's New Spacecraft Could Make 'Gravity-Flat' Space Seismology Possible Boeing's CST-100 Starliner spacecraft, as it has flown into orbit, and captured at least two flights in the past year. Image Credit: John Fredette/NASA Boeing's CST-100 Starliner spacecraft, as it has flown into orbit, and captured at least two flights in the past year. Image Credit: John Fredette/NASA Aug. 20 (UPI) -- NASA's upcoming unmanned mission to fly astronauts to the International Space Station and eventually Mars could pave the way for new investigations of our universe. NASA's Boeing's Starliner spacecraft -- which is scheduled to blast off from Kennedy Space Center in Florida on Monday, Aug. 30 -- could be used to gather data on the effects of gravity on the planet's crust and mantle, and contribute to the understanding of our universe. "We know that you get flattening of the planet's crust on Mars as you go farther away from the center, and you get gravitational compression of the mantle under the crust, and in between there are differences in the physical properties of the crust and the mantle, and we don't understand that on Earth very well," Paul Spudis, senior research scientist at the Lunar and Planetary Institute in Houston, Texas, said in a press release. "This mission allows us to start to study this on other worlds, and we haven't been able to do this before." To gather the data, Boeing will send its modified CST-100 Starliner spacecraft to the International Space Station, where it will dock with the orbiting outpost and will use its thrusters to fly away from the station -- which is orbiting high above the Earth's surface -- and back to the planet's surface. The spacecraft will then be prepared to fly to one of NASA's 20 planned sites for surface probes, where it will send back
