**What It Does:** This tool is the one everyone should know what they're doing with a painting brush, even if they've never actually painted before. It's perfect for creating all different kinds of effects, from making things "pop" to adding extra highlights or shadows to a photo. **What It Does:** There

are quite a few different tools that make the changes you see in most photo editors, but the Levels tool is likely the most important for effective, long-lasting edits. You can make any color in an image brighter or darker and sometimes you only need to make a particular section lighter or darker to make it pop. **What It Does:** As it says, the purpose of this tool is one of the most obvious. The Magnify tool lets you increase the size of an object you're editing. This can come in handy for making just about any kind of font look a bit bigger. This tool isn't the most complex, but it's incredibly powerful for adding some context to these big-time fonts. **What It Does:** While the Clone Stamp tool doesn't have much depth to explore, it is a really fun tool to use when it comes to making quick corrections. This tool allows you to easily re-create parts of the image when you're making changes. Sometimes, you can use this tool with the Clone Stamp tool to remove a small, annoying imperfection without actually altering the surrounding area. **What It Does:** During the process of a photo shoot, the Healing Brush tool is like an automatic misshapen eyeshadow correction device. If you have a blob or a small-ish change, you can use this tool to remove it easily and get a perfect shot. This tool is indispensable. e3d0a04c9c
