
First-Ever Microsoft Linux Conference Announced For March 10-11, 2020

[Download](#)

the first-ever microsoft linux conference is a free event for all linux enthusiasts and anyone interested in how windows and microsoft solutions are used in the open source world, including the linux community. the conference will be held in three time zones, with speakers from microsoft, red hat, and other industry experts. microsoft this week announced a partnership with red hat to offer a new microsoft linux certified professional (mlcp) credential for linux professionals. the mlcp credential provides in-depth, real-world linux training for employees who are currently using the linux operating system, or have knowledge of linux. microsoft has even been very open in sharing their linux code with the foss community. in fact, they even have linux kernel developers as part of their linux technical fellow program. with the recent decisions of the linux community to allow open sourcing of the linux kernel and the open sourced hyper-v linux kernel, it is no doubt that microsoft may be planning to fork linux to avoid the gpl, and use that instead. that would make sense too, as there is no other open source way to replace hyper-v with a high performance linux kernel that has more features. of course, the linux community has been very open in welcoming microsoft to join in the foss community so theres no telling what they may want to do with the linux kernel. this is really an interesting direction that microsoft is taking for the future. we will be seeing some major features in 2020 from microsoft and it looks like linux will be a huge part of that. not only will linux be a major part of the code base of windows, but they will be embracing linux even more as they move

forward in the year to come. it is now clear that linux is going to be the new os of choice for the future, and microsoft is embracing that, and even sponsoring and participating in it. this is a great thing for the future of all operating systems. microsoft has been a really great contributor to the foss community over the years, and this is another way they are continuing that in the future.
