While there is a certain craftiness to the look and feel of Photoshop, it's bleeding edge. PSD files are not inherently tied to a specific version of Photoshop; you can open any DNG or TIFF file, but Photoshop will sometimes recognize the file as having been created in a version of Photoshop that it didn't recognize, and will prompt you to update it. If you find yourself using Photoshop more and more, it's tempting to need the latest version, but it may not be worth the cost or the time required. I didn't think it possible to love a program more than I do, but Photoshop is the software used by professionals and designers all around the world. Adobe has published a larger catalog, which is available here. It contains a lot more than the "featured images" shown in the previous screenshot. Adobe says this is from "hundreds of thousands of Kodak images." The larger catalog can be downloaded by Firefox users from: <http://adobe-acquired.com/lightroom5/> For me, I think the catalog is about 80% of the size of the smaller catalog I was used to. I'd expect that Lightroom users should be able to import the smaller catalog directly. And, maybe, Adobe will be adding other Kodak images or newer Canon images as they become available.

For those of you who use Photoshop for image editing, creating layered PSD images is something you probably should learn. Layered PSD files contain a group of layers featuring different parts of an image.
