The new Creative Cloud is a pretty major jump for Adobe. After trying the service for a few days here and there, I have to say the new CC is fantastic. I have to say that a bit differently. I have to say that at a price of \$100 a month for 50 GB of online storage and access to Adobe Photoshop, Lightroom, Dreamweaver, Flash, After Effects, and twenty more add-on video effects, suite and plugins (not to mention the 40 GB of free storage), and the ability to output to both mobile and desktop computers, the new CC is a real steal. Photoshop CC also adds welcome new options like another homage to the humble egg — the default shape option is the egg. It also automatically selects the best filter, or layer style, for your content. In addition, Adobe has improved the way layers are organized so it's easier to see what's going on. According to an analyst who had a chance to review the new Apple computer in person, the 2016 Macbook Pro is still the most popular model and has the highest market share in terms of unit sales. Adobe is shaking things up with the release of Photoshop CS6. With the introduction of Elements, the company is putting a suite of products at the low end of the market segment. Upgrading a customer to the new lineup from Photoshop CS6 is time consuming, though, because the company made it a one-time-only option. But, to get these new features at a breakneck pace, CS6 is now available for download at Adobe.com. Not being able to update CS6 over the life of the product's life cycle is a concern.
